## **MxSecure, Inc. Launches Internet-Based Document Management & Transcription Option for Small Medical Practices and Solo Providers**

*MxNotes™ gives small practices affordable entry into electronic medical records*

Scottsdale, AZ, (PR WEB) May 5, 2009 – MxSecure, Inc., the nation's leading provider of transcription services to group practices, multi-specialty clinics and community health centers, announced today the release of MxNotes™, an Internet-based transcription software designed specifically for solo providers and small medical practices. MxNotes allows physicians to manage their patient records efficiently through a HIPAA compliant and secure website that is fully compatible with any operating system or Internet browser. There is no software to download. Physicians can upload dictations and review, edit and approve files online 24 hours a day, 7 days a week. MxNotes is so fast and easy that physicians can begin uploading dictations almost immediately.

"Typically, solo providers and smaller practices have minimal administrative support and limited funds available to invest in healthcare technology. MxNotes™ is a cost effective transcription solution that specifically addresses the unique needs of these smaller practices," said Colin Christie, MxSecure's CEO. "MxNotes is a simple, easy to use and secure transcription and document management service that allows small practices to take the first step towards electronic medical records. Physicians will appreciate the ability to manage their patient records online, improve their workflow, and lower overall costs. Plus, improved documentation of their medical records means physicians will see fewer claim rejections."

### **Exclusive Features of MxNotes™:**

- *Enhanced Document Management and Simple Workflow:* MxNotes offers a library of templates that are compatible with all major specialties. MxNotes offers unlimited online storage of transcribed documents, giving users continuous access to archived records. Every function is simple and user friendly.
- *Versatile Reporting Tools:* Physicians and approved support staff can view detailed invoices and check the status of dictated medical records in real time. Users can choose to receive email notification when their files are completed and may mark a file "STAT" for rush turnaround.
- *Advanced Security Features:* The practice administrator or physician can easily add, edit or remove any registered user, set user rights and reset user passwords.
- *Getting Started is Fast and Easy:* A physician can sign up, choose appropriate templates and upload dictated files to be transcribed in a matter of minutes.

### **About MxSecure, Inc.**

MxSecure, Inc. – the fastest growing provider of medical transcription services to medical practices as recognized by *Inc. 5000* – serves thousands of health care providers in over 600 medical facilities nationwide. MxSecure clients include physician and group practices, community health centers and multi-state, multi-specialty clinics. The company's digital medical transcription and electronic document management system – MxTranscribe EHR™ – includes Internet-based access to files 24/7; online review and editing; single and dual electronic signature; key word search capabilities; distribution options for routing to network printers, faxing and secure e-mail; and detailed management reporting tools. MxTranscribe EHR™ is fully scalable to multiple clinic locations with no capital outlay required. MxSecure also offers MxNotes™, a user-friendly, internet-based transcription service designed exclusively for medical practices with fewer than three physicians. With MxNotes™ physicians can dictate, review and edit electronic transcriptions within 24 hours of signing up. For more information see [www.MxSecure.com](http://www.MxSecure.com)
